Backend Schema Document

Stitch: where the data lives, how it connects and who can see it.

1 Overview

This document defines where Stitch data is stored, how it is structured and who can access it. It describes the Supabase backend as it exists today.

67	17	20	3
Tables (RLS on)	Storage buckets	Edge functions	Scheduled jobs

2 Data Model

Figure 1: Key tables and how they connect. The left line shows that a user (public_profiles) owns rows in messages, creator_profiles and meetings. 1 = one, N = many. Colors group tables by area.

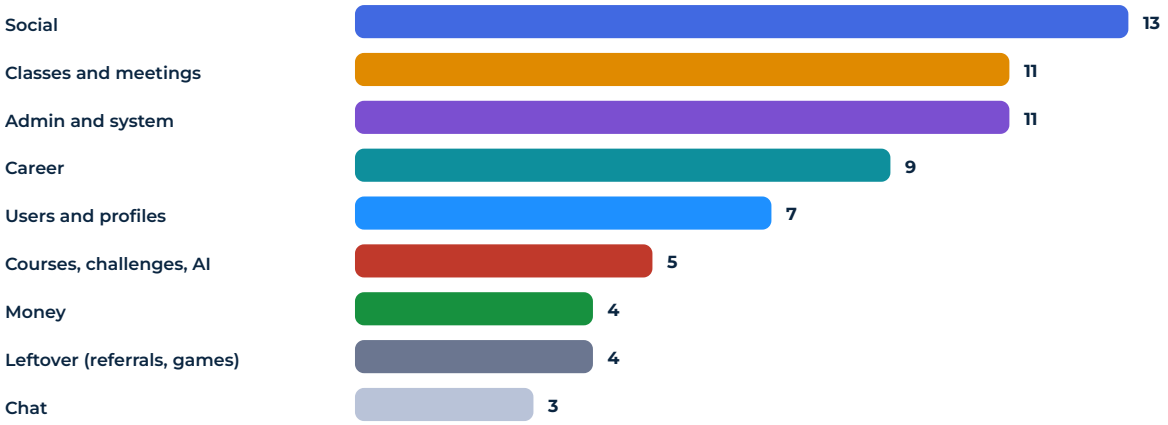

Figure 2: Tables per area (67 tables in total).

Area	Tables
Users and profiles	public_profiles, profiles, user_state, user_subscriptions, connection_requests, profile_views
Social	posts, post_likes, post_reposts, post_saves, post_views, post_shares, post_comments, post_comment_reactions, glimpses, glimpse_views, glimpse_story_seen, notifications, app_notices
Chat	messages, collaborations, collaboration_members
Classes and meetings	classes, class_invites, class_messages, class_submissions, class_payments, class_reports, meetings, meeting_members, meeting_messages, lecture_messages, lecture_chat_members
Courses, challenges, AI	courses, challenge_invites, challenge_participants, ai_usage, ai_proxy_usage
Career	opportunities, opportunity_applications, opportunity_reports, career_subscriptions, career_subscription_payments, career_cancel_reasons, job_payments, poster_blocklist
Money	creator_profiles, payments, wallet_ledger, payouts
Admin and system	content_reports, admin_audit_log, platform_settings, backend_mode, push_subscriptions, push_log, email_send_log, email_digest_log, disposable_email_domains, test_login_failures, push_internal
Backups and leftovers	user_state_photo_backup, opportunities_expired_backup, referral_codes, referral_points, referrals, game_invites

Key relationships

- One user has one public profile, one private profile record and at most one creator profile
- One user has many posts, glimpses, comments, messages, notifications and payments
- One post has many likes, comments, reposts, saves, views and shares
- A connection request links two users
- One class has many invites, messages, submissions and payments; one meeting has many members and messages
- One opportunity has many applications and reports
- One payment creates ledger entries; a creator's ledger feeds payouts

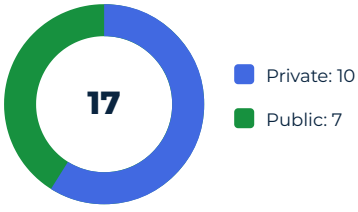

3 Access Control

Who can see and manage different types of data. This is the intended rule set and must be checked against the live policies before launch.

Data	Visitor	Student	Creator / Teacher	Poster	Admin
Public profile	No	View	View, edit own	View, edit own	Full
Posts and glimpses	No	View, manage own	Manage own	Manage own	Moderate
Messages and calls	No	Own only	Own only	Own only	Via reports only
Classes	No	Joined	Create, manage own	No	Moderate
Courses	No	View, buy	Create, manage own	No	Moderate
Opportunities	No	View, apply	View, apply	Create, manage own	Moderate
Applications and CVs	No	Own only	Own only	Applications to own listings	Limited review
Verification files	No	No	No	Own only	Review
Payments and wallet	No	Own purchases	Own earnings	No	Via admin functions
Payouts	No	No	Request own	No	Approve
Reports and audit log	No	Create	Create	Create	Full

- Everyone can change only their own data
- Private accounts: messaging needs an accepted connection
- Money, prices, fees and payouts change only through server functions
- Admin actions go through admin-actions and are written to admin_audit_log
- The reviewer account sees only its own data and has no way around these rules

4 Data Storage

> Users can only touch their own folder in private buckets. Sensitive files such as IDs, selfies, CVs and documents are never public.

Bucket	Visibility	Limit	Holds
profile-photos	Public	10 MB	Profile pictures
post-media	Public	50 MB	Post images and videos
course-media	Public	50 MB	Course media
lecture-files	Public	20 MB	Lecture files
resource-files	Public	50 MB	Shared resources
opportunity-covers	Public	2 MB	Opportunity covers

Bucket	Visibility	Limit	Holds
poster-photos	Public	10 MB	Poster photos
chat-media	Private	50 MB	Chat attachments
chat-voice-notes	Private	10 MB	Voice notes
ai-chat-media	Private	20 MB	AI class uploads
classwork-files	Private	20 MB	Class work
application-documents	Private	10 MB	Application documents
resume-files	Private	10 MB	CVs
poster-id-documents	Private	15 MB	ID documents
poster-selfies	Private	15 MB	Verification selfies
poster-business-documents	Private	15 MB	Business documents
poster-proof-of-residence	Private	15 MB	Proof of residence

5 Edge Functions and Scheduled Jobs

AI
ai-proxy, career-ai

Payments
paystack-verify, paystack-webhook, request-payout, approve-payout

Verification
verify-poster-id, verify-poster-selfie, smile-id-callback

Messaging
send-email, send-push, send-daily-digest, send-notice-email

Account and admin
delete-account, admin-actions

Reviewer account
test-account-login, test-account-join-class

Also deployed: quick-action, dynamic-endpoint, bright-function.

- Remove expired opportunities
- Clean up stale meetings
- Remove unfinished sign-ups (hourly, 2-hour grace, skips the reviewer account)

6 Data Notes and Cleanup

Item	Action
JSON data columns	posts, glimpses, courses, classes, opportunities and user_state keep most fields in one data column. Promote the fields you filter by to real columns over time
Leftover tables	Archive then remove referral_codes, referral_points, referrals, game_invites
Backup tables	Review and remove opportunities_expired_backup and user_state_photo_backup
push_internal	Holds internal secrets. Never expose or export it
Performance	Add indexes for new queries and paginate every list
Process	Keep migrations in git, test policies as each user type, run the Supabase advisor after each change
Before launch	Staging and development projects, daily backups with point-in-time recovery, tested restore
