Launch Readiness Map

Stitch against the 20 pre-launch checks: what is done, what is not, what can be fixed.

1 Overview

This maps Stitch (the code and the Supabase project) against the 20 pre-launch checks. 7 are done, 8 are partly done and 5 are not done. Everything marked "Me" can be fixed in the code or database; the rest needs your decision or account.

All 20 items are fixable. None is a blocker you cannot solve.

2 The 20 Checks

#	Check	Status	What I found	Fix
1	Privacy policy page	Partly	Exists only as a pop-up inside the app, so it has no web address. Stores and Paystack need a public page.	Me: make a /privacy page. You: legal review.
2	Terms and conditions page	Partly	Same problem. Some wording is also old (notes, exams, flashcards).	Me: make /terms and update wording.
3	Secrets off the frontend	Done	Only public keys are in the code (Supabase, Paystack public, PostHog, Sentry, push). No private keys found.	Nothing to do.
4	Force HTTPS	Done	Strict security headers are in vercel.json.	Me: recreate them on Cloudflare.
5	Cookie consent banner	Not done	No consent notice. PostHog session replay is switched on for everyone.	Me: add a notice with opt-out, turn replay off by default.
6	Meta titles and descriptions	Partly	Title is just "Stitch". Description is old. Address points to the Vercel site.	Me: rewrite once the domain is chosen.
7	Social preview image	Done	Open Graph and Twitter tags with a 1200 x 630 image exist.	Me: swap the Vercel address for the new domain.
8	Favicon	Partly	Icons are in the assets folder but nothing sits at the site root, where browsers look first.	Me: quick fix.
9	Sitemap and robots.txt	Partly	Both exist but list only the home page, with Vercel addresses.	Me: update after the domain, add /privacy and /terms.
10	Alt text on images	Not done	About 65 of 85 images created by the code have no alt text; 13 have it empty.	Me: add it in the code.

#	Check	Status	What I found	Fix
11	Compress images	Not done	Fixed images are fine. Photos and videos users upload go up at full size.	Me: resize and compress before upload.
12	Page load speed	Not done	23 scripts block the first screen, about 5.4 MB of code not minified, and 715 KB of styles with fonts embedded. The old games file carries about 836 KB of embedded data.	Me: remove games leftovers, defer scripts, minify, lazy-load.
13	Color contrast	Partly	Muted grey text on white is too faint (3.06 against a 4.5 target). White text on the bright blue button is 3.24. Dark mode passes.	Me: darker grey for light mode. You: decide on the button blue.
14	Mobile friendly	Done	Built mobile first, installable as an app.	Test on a cheap Android phone.
15	Custom 404 page	Done	Branded 404 page exists.	Me: carry over to the new host.
16	Fix broken links	Not done	Share links point to stitch.app, which you do not own, and nothing in the app handles /join or /@username links. 11 "javascript:void" and 2 "#" links.	You: own the domain. Me: build link handling.
17	Form validation	Partly	Screens check input well. The database has almost no rules of its own (only meetings and reports).	Me: add database checks.
18	Spam protection	Partly	Disposable-email check is in the app and the sign-up hook, but the blocked-domains table is empty. No captcha. Limits only on notifications and AI, none on posts, comments or messages.	Me: fill the list, add limits. You: Cloudflare Turnstile key.
19	Analytics	Done	PostHog is live and respects Do Not Track.	Pair with item 5.
20	One clear call to action	Done	"Get Started" is the single main button on the landing page.	Nothing to do.

3 Supabase Findings

Finding	Detail	Fix
Data access rules	All 69 tables have row-level security on. 14 have no policy, which locks them to the server and is probably intended.	Review the list
Functions anyone signed in can call	63 database functions are callable by any signed-in user. Most check who is calling inside. Leftovers such as the referral functions should be removed or locked.	Revoke access on admin and leftover ones
Test account reset	Restricted to one test email inside the function, so safe.	Keep
Disposable email list	The hook works but the domain table is empty.	Seed it
Speed	5 foreign keys have no index (lecture and meeting chat tables). 2 policies recalculate per row. 3 tables have overlapping policies.	One small migration
Unused indexes	32 are unused. Low priority; wait for real traffic.	Later
Leaked-password check	Off, but sign-in is by email code, so little effect.	Optional

4 Suggested Order

Step	Work	Needs from you
1. Quick wins	Favicon at root, titles and descriptions, alt text, grey contrast, seed blocked emails, index migration	Nothing
2. Trust pages	Public /privacy and /terms, cookie notice, session replay off by default	Legal review of the text
3. Speed	Remove games leftovers, defer and minify scripts, lazy-load libraries, compress uploads	Nothing
4. Safety	Database checks, rate limits on posts, comments and messages, lock leftover functions	Turnstile key
5. Domain day	Update addresses, sitemap, share links and link handling, security headers on Cloudflare	Buy the domain
